👤 PROFILE

I am a technology enthusiast with a curious mind who is always eager to learn and acquire new skills in order to solve the more difficult problems. Seeking out tough challenges interest me as they have taught me the most valuable lessons in life. In recent times I have been quite intrigued by AI and it's impact on our society. Apart from work I am a musician with immense love for science fiction, history, and the arts.

💼 EMPLOYMENT HISTORY

Senior Software Engineer at Aize, Aberdeen
April 2021 — Present

My primary role and responsibilities at Aize are to rapidly build components for the Digital Twin Suite for which I rely upon my experience with Javascript, ThreeJS and my prolonged exposure to various backend frameworks. I can proudly say that not having much professional experience with the java framework Spring or .NET has not had any effect on my performance as I'm among the few full stack engineers in the company who work across multiple products and as such have to deal with numerous tools.

Senior Software Engineer at Insidemaps, Remote
July 2020 — April 2021

My core responsibilities at Insidemaps was as a full stack engineer primarily working on the MERN stack and learning and diving into ThreeJS. I would work on the various helper tools built in-house that supports the virtual 3D tours. Often times I would write mongo queries, create express APIs and consume it with react and later manipulate scenes. Occasionally, I'd set up EC2 instances on AWS and serve isolated tools using SQS to broadcast crucial data across the helper tools.

Freelance Software Engineer at Upwork, Remote
January 2020 — July 2021

I mostly did some RubyOnRails, React and Docker gigs during this short time.

Lead Software Engineer at Hashkloud Bangladesh Limited, Dhaka
July 2017 — January 2020

I was one of the first engineers in the company and helped form my own team of five. Having worked in Malaysia with the company's management I was uniquely equipped with the domain knowledge and the other products in the market. My primary role was to lead the team to build a payment platform, designing the processes, database and outlining the architecture. I built APIs with RubyOnRails, frontend components with AngularJs and subsequently with React. I was also responsible for all our infrastructure in AWS.

Senior Software Engineer at Hashklout Pty Ltd, Kuala Lumpur
February 2016 — June 2017

I worked as a full stack engineer working with RubyOnRails and AngularJs and was responsible for devOps using AWS. I worked on multiple products focusing on digital services in various industries like education and banking. I picked up a lot of domain knowledge and processes.

Lead Software Engineer at Mayalogy Pvt Ltd, Dhaka
January 2015 — December 2015

I led a team of six to build and support the core product of Maya which is a messaging service. I helped build the Laravel backend and the admin panel using AngularJs. I liaised and designed APIs for the mobile app which has over 100,000 downloads in the Android app store. The other aspect for my role was to shift to AWS and essentially all of devOps.

Software Engineer at Infrablue Technologies, Dhaka
2013 — 2014

I was hired here after being a part time intern as a web developer. Throughout the year I had worked with PHP, .NET, JQuery and RubyOnRails on various projects.

EDUCATION

Bachelor of Science in Computer Science, Brac University, Dhaka
2010 — 2016

Graduated with a CGPA of 3.01

Exchange Program, University Lucian Blaga of Sibiu, Sibiu
July 2013 — February 2014

Transferred credits to Brac University

GCE A Levels, The Cambridge Shcool, Calcutta
2009

Received 2As and 1B

GCE O Levels, Bridge International School, Calcutta
2007

Received 4As, 3Bs and 2Cs
